

Ensuring a Cleaner Future with Innovation Today

EOx™ is a scientifically-proven technology for stimulating aerobic bioremediation. When hydrated, EOx™ powder slowly releases oxygen that stimulates indigenous aerobic microorganisms, accelerates bioactivity, and promotes increased contaminant removal. This controlled release technology is easy to apply and effectively sustains long-term biodegradation of a wide range of organic contaminants such as gasoline, fuel oils, MTBE, creosote, PAHs, pentachlorophenol, and vinyl chloride.

EOx™ Benefits:

- Controlled release of oxygen.
- Long-term source of oxygen.

EOx™ Provides:

- Over 16% oxygen by weight.
- More oxygen per dollar than other commercially available "advanced" oxygen-releasing compounds.

EOx™ Applications:

- Direct application of EOx™ powder or water slurry in excavations.
- EOx™ and water slurry injection for source treatment or permeable reactive barriers (PRBs).

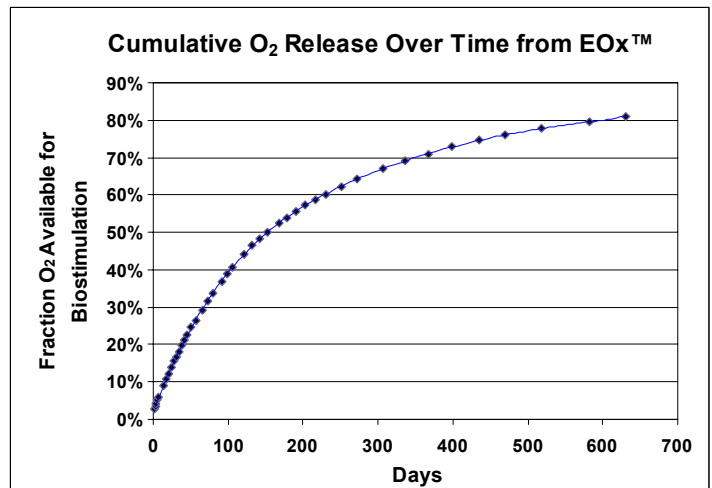

Direct application of EOx™ powder to soils.

EOx™ is economical and offers considerable capital cost savings over other commercially available "advanced" oxygen-releasing compounds. EOx™ helps nature take the lead by stimulating bacteria that biodegrade the hydrocarbons contaminating your site. EOx™ technology quickly remediates your site allowing it to be returned to use or re-developed sooner than many other approaches.

About EOS Remediation, LLC

EOS Remediation leads in scientifically field-proven products for Enhanced Anaerobic Bioremediation, Enhanced Aerobic Bioremediation and Bioaugmentation.

EOx™ is laboratory-tested and proven to generate oxygen for an extended time. As shown below, EOx™ continues to release oxygen almost two years after initial application. This built-in longevity reduces the need for re-application resulting in lower material and labor costs over the life of the project.

Technical Design Support from EOS Remediation: EOS Remediation personnel are recognized worldwide as industry leaders in bioremediation. EOS Remediation technical staff is available to serve and help you identify your project needs. The EOx™ **Design Tool** is a simple approach to developing your site-specific requirements and estimating product amount. Value added engineering and outstanding customer service underlie our goal to provide superior remediation products leading to project success for our customers.

Warehouse: Unit 59/148 Chesterville Road Moorabbin Vic 3189 Australia
